

## Provides AI led Digital Engineering for the Connected Enterprise

### Our Solution Accelerators

A pilot can be deployed in as little as about four weeks. Get in touch for a pilot and business value assessment.

#### Customer Data Platforms

CDPs are not just glorified dashboards. They are a driver of relevant AI modeling, what-if analysis, and seamless integration of AI into your applications and processes. Our CDP accelerator can be operational in less than about 90 Days. It integrates with MS, AWS, Domo, GCP, and Snowflake, and has multiple prebuilt AI models.

#### Intelligent Quality Accelerator (IQA)

The Intelligent Quality Accelerator will reduce 20% of your software delivery life cycle by using AI to automatically generate test cases from your user stories. It will also schedule test execution and deploy the test infrastructure automatically.

#### Intelligent Data Accelerator (IDA)

It's no secret that up to 60% of all AI and data management effort is spent merging and matching data files so you can finally have clean data. Our AI driven approach does that automatically. Saves you time with new client onboarding, and everyday operational complexity.

### Our Core Services

#### Data & AI

We help you monetize and unlock the true value of your data by following a logical 5-step data framework that addresses the full cycle from data engineering to compliance to insights generation. We make AI adoption a priority and streamline insights consumption using APIs & Customer Data Platforms (CDP). We use advanced AI-enabled data engineering to accelerate enterprise data lake roadmaps.

#### Automation Integration

Data and process islands are a feature, not a bug, of fast-moving, innovative enterprises. We help you keep things in sync by using the right integration and automation techniques to make golden sources and straight through processing easy.

#### Product Engineering

Traditional application development does not bake in security, analytics, and AI into the SDLC process. You need cloud native, grounds up security with meaningful AI built-in for highly personalized and inter-connected products. These are part of everything we do.

#### Cloud & Cybersecurity

Maximizing the security and performance of your business with comprehensive enterprise cybersecurity services. We analyze and implement comprehensive cybersecurity measures as an integral part of your digital and data business processes. As a result, you get security that is robust and built from the ground up, not just bolted on.
